

## Piper Twin Comanche Annual Inspection Survey

<u>Left</u>	<u>Right</u>	<u>50 Hr</u>	<u>100 Hr</u>	PROPELLER GROUP
		X X X	X X X X X X X	Inspect spinner and backplate for cracks Inspect prop blades for nicks and cracks Inspect for grease and oil leaks Lubricate per lube chart in service manual Inspect spinner mounting brackets for cracks Inspect prop mounting bolts and safety (Check torque if safety is broken) Inspect hub parts for cracks and corrosion Check prop air pressure (Check monthly if possible)
<u>Left</u>	<u>Right</u>	<u>50 Hr</u>	<u>100 Hr</u>	ENGINE GROUP
				Caution: Ground Magneto Primary Circuite Before Working On Engine (See Note #8)
		X X	X X X	Remove engine cowl Clean and inspect cowling for crack, distortion, loose or missing fasteners Drain oil sump
		X	X	Clean suction oil screen, replace gasket, replace screen and torque to 20-25 ft-lbs (240-300 in-lbs)
		X	X	Change oil filter. Fill engine with 7 quarts Phillips 20W-50 XC oil and 12oz CamGuard
			X X X	Inspect oil temperature sending unit for leaks and security Inspect oil lines for leaks, security, chafing, dents and cracks (See note #7) Clean and check oil cooler cooling fins
		X	X	Inspect valve covers for evidence of of oil leaks. If found, replace with silicone gaskets and torque cober screws to 50 in-lbs
			X	Inspect wiring to engine and accessories. Inspect terminals for security and cleanliness
			X	Inspect spack plug cable leads and ceramics for corrosion and deposits. Inspect condition of spark plugs; clean and gap as required. If fouling of plugs is apparent, rotate bottom plugs to upper plugs. Gap to .015021" (Light Plane Mx June '91)
			X	Check cylinder compressions (Warm):  #1 #2 #3 #4  Left: /80 /80 /80 /80  Right: /80 /80 /80 /80
			X X X X	Check cylinders for cracks or broken cooling fins Clean engine Check magneto main points for clearance. Maintain .018+/006 Check magneto for oil seal leakage Inspect breaker felts for proper lubrication
			X	Inspect distributeor block for cracks, burned areas or corrosion and height of contact springs
			X	Check magnetos to engine timing 25° BTC

		X	X	Remove induction air filter, inspect and replace if necessary. Repace Brackett air filter annually regardless of condition
		X	X	Remove and clean fuel injector inlet line screen (clean injector nozzles as
				required with acetone only)
		X	X	Inspect injector system for signs of fuel dye indicating leaks
			X	Inspect alternate air takeoff assembly. Remove air duct hose to inspect door.
			X	Inspect alternate air inlet valve bracket hinge pinholes for excessive wear
			X	Inspect intake seals for leaks and clamps for tightness
			X	Inspect condition of flexible fuel lines
			X	Inspect fuel system for leaks
			X	Check fuel pumps for operation
			X	Inspect vacuum pumps and lines
			X	Inspect throttle, alternate air, mixture and prop governor controls for travel and operating condition
		X	X	Inspect exhaust stacks and gaskets
			X	Inspect breather tube for obstructions and security
			X	Inspect crankcase for cracks, leaks and secirity of case seam bolts
			X	Inspect engine mounts for cracks, positioning and loose mounting
			X	Inspect rubber engine mount bushings for deterioration (See note 12)
			X	Inspect all engine baffles
			X	Inspect firewalls for cracks
			X	Inspect firewall seals
			X	Inspect condition and tenson of alternator drive belts
			X	Inspect condition of alternator and starter
			X	Inspect and replace if necessary vacuum regulator filter. Replace at least annually regardless of condition.
				<i>y</i> 8
			X	Lubricate all controls. Do not lubricate Teflon liners of control cables.
			X	Lubricate all controls. Do not lubricate Teflon liners of control cables.
□ <u>Left</u>	□ <u>Right</u>	<u>50 Hr</u>	X <u>100 Hr</u>	Lubricate all controls. Do not lubricate Teflon liners of control cables.  **TURBOCHARGER GROUP**
<u>Left</u>	<u>Right</u>		<u>100 Hr</u>	
		<u>50 Hr</u> X		TURBOCHARGER GROUP  Inspect all rubber air inlet ducting and compressor discharger ducting for worn spots, loose clamps or leaks
<u>Left</u>	<u>Right</u>		<u>100 Hr</u>	TURBOCHARGER GROUP  Inspect all rubber air inlet ducting and compressor discharger ducting for worn spots, loose clamps or leaks Inspect fiberglass engine air inlet assembly for cracks, loose clamps and
<u>Left</u>	Right	X X	<u>100 Hr</u> X X	TURBOCHARGER GROUP  Inspect all rubber air inlet ducting and compressor discharger ducting for worn spots, loose clamps or leaks Inspect fiberglass engine air inlet assembly for cracks, loose clamps and loose screws
<u>Left</u> □	<u>Right</u>	X	<u>100 Hr</u> X	TURBOCHARGER GROUP  Inspect all rubber air inlet ducting and compressor discharger ducting for worn spots, loose clamps or leaks Inspect fiberglass engine air inlet assembly for cracks, loose clamps and
<u>Left</u>	Right	X X X	100 Hr  X  X  X	TURBOCHARGER GROUP  Inspect all rubber air inlet ducting and compressor discharger ducting for worn spots, loose clamps or leaks Inspect fiberglass engine air inlet assembly for cracks, loose clamps and loose screws Inspect waste gate housing, exhaust ducting and exhaust stacksfor signs of leaks or cracks
<u>Left</u>	Right	X X	<u>100 Hr</u> X X	TURBOCHARGER GROUP  Inspect all rubber air inlet ducting and compressor discharger ducting for worn spots, loose clamps or leaks Inspect fiberglass engine air inlet assembly for cracks, loose clamps and loose screws Inspect waste gate housing, exhaust ducting and exhaust stacksfor signs of
<u>Left</u>	Right	X X X	100 Hr  X  X  X	TURBOCHARGER GROUP  Inspect all rubber air inlet ducting and compressor discharger ducting for worn spots, loose clamps or leaks Inspect fiberglass engine air inlet assembly for cracks, loose clamps and loose screws Inspect waste gate housing, exhaust ducting and exhaust stacksfor signs of leaks or cracks Carefully inspect all turbo support brackets, struts, etc. for breakage, sagging or wear Inspec all oil lines, fuel lines and fittings for wear, leakage, heat damage or
<u>Left</u>	<i>Right</i>	X X X X	100 Hr  X  X  X  X  X	TURBOCHARGER GROUP  Inspect all rubber air inlet ducting and compressor discharger ducting for worn spots, loose clamps or leaks Inspect fiberglass engine air inlet assembly for cracks, loose clamps and loose screws Inspect waste gate housing, exhaust ducting and exhaust stacksfor signs of leaks or cracks Carefully inspect all turbo support brackets, struts, etc. for breakage, sagging or wear Inspec all oil lines, fuel lines and fittings for wear, leakage, heat damage or fatigue
<u>Left</u>	<i>Right</i>	X X X	100 Hr  X  X  X  X  X  X	Inspect all rubber air inlet ducting and compressor discharger ducting for worn spots, loose clamps or leaks Inspect fiberglass engine air inlet assembly for cracks, loose clamps and loose screws Inspect waste gate housing, exhaust ducting and exhaust stacksfor signs of leaks or cracks Carefully inspect all turbo support brackets, struts, etc. for breakage, sagging or wear Inspec all oil lines, fuel lines and fittings for wear, leakage, heat damage or fatigue Actuate waste gate control: check spring preload and examine control fr any pending sign of breakage
Left	<i>Right</i>	X X X X	100 Hr  X  X  X  X  X  X  X	Inspect all rubber air inlet ducting and compressor discharger ducting for worn spots, loose clamps or leaks Inspect fiberglass engine air inlet assembly for cracks, loose clamps and loose screws Inspect waste gate housing, exhaust ducting and exhaust stacksfor signs of leaks or cracks Carefully inspect all turbo support brackets, struts, etc. for breakage, sagging or wear Inspec all oil lines, fuel lines and fittings for wear, leakage, heat damage or fatigue Actuate waste gate control: check spring preload and examine control fr any pending sign of breakage Remove inlet hose to compressor and visually inspect compressor wheel
<i>Left</i>	<i>Right</i>	X X X X	100 Hr  X  X  X  X  X  X  X  X	Inspect all rubber air inlet ducting and compressor discharger ducting for worn spots, loose clamps or leaks Inspect fiberglass engine air inlet assembly for cracks, loose clamps and loose screws Inspect waste gate housing, exhaust ducting and exhaust stacksfor signs of leaks or cracks Carefully inspect all turbo support brackets, struts, etc. for breakage, sagging or wear Inspec all oil lines, fuel lines and fittings for wear, leakage, heat damage or fatigue Actuate waste gate control: check spring preload and examine control fr any pending sign of breakage Remove inlet hose to compressor and visually inspect compressor wheel Inspect the compressor wheel for nicks, cracks or broken compressor blades
Left	<i>Right</i>	X X X X	100 Hr  X  X  X  X  X  X  X	Inspect all rubber air inlet ducting and compressor discharger ducting for worn spots, loose clamps or leaks Inspect fiberglass engine air inlet assembly for cracks, loose clamps and loose screws Inspect waste gate housing, exhaust ducting and exhaust stacksfor signs of leaks or cracks Carefully inspect all turbo support brackets, struts, etc. for breakage, sagging or wear Inspec all oil lines, fuel lines and fittings for wear, leakage, heat damage or fatigue Actuate waste gate control: check spring preload and examine control fr any pending sign of breakage Remove inlet hose to compressor and visually inspect compressor wheel Inspect the compressor wheel for nicks, cracks or broken compressor blades Inspect for excess bearing drag or compressor wheel rubbing against
Left	<i>Right</i>	X X X X	100 Hr  X  X  X  X  X  X  X  X	Inspect all rubber air inlet ducting and compressor discharger ducting for worn spots, loose clamps or leaks Inspect fiberglass engine air inlet assembly for cracks, loose clamps and loose screws Inspect waste gate housing, exhaust ducting and exhaust stacksfor signs of leaks or cracks Carefully inspect all turbo support brackets, struts, etc. for breakage, sagging or wear Inspec all oil lines, fuel lines and fittings for wear, leakage, heat damage or fatigue Actuate waste gate control: check spring preload and examine control fr any pending sign of breakage Remove inlet hose to compressor and visually inspect compressor wheel Inspect the compressor wheel for nicks, cracks or broken compressor blades
Left	<i>Right</i>	X X X X	100 Hr  X  X  X  X  X  X  X  X  X	Inspect all rubber air inlet ducting and compressor discharger ducting for worn spots, loose clamps or leaks Inspect fiberglass engine air inlet assembly for cracks, loose clamps and loose screws Inspect waste gate housing, exhaust ducting and exhaust stacksfor signs of leaks or cracks Carefully inspect all turbo support brackets, struts, etc. for breakage, sagging or wear Inspec all oil lines, fuel lines and fittings for wear, leakage, heat damage or fatigue Actuate waste gate control: check spring preload and examine control fr any pending sign of breakage Remove inlet hose to compressor and visually inspect compressor wheel Inspect the compressor wheel for nicks, cracks or broken compressor blades Inspect for excess bearing drag or compressor wheel rubbing against Inspect induction and exhaust components for worn or damaged areas, loose clamps, cracks and leaks
Left	<i>Right</i>	X X X X	100 Hr  X  X  X  X  X  X  X  X  X	Inspect all rubber air inlet ducting and compressor discharger ducting for worn spots, loose clamps or leaks Inspect fiberglass engine air inlet assembly for cracks, loose clamps and loose screws Inspect waste gate housing, exhaust ducting and exhaust stacksfor signs of leaks or cracks Carefully inspect all turbo support brackets, struts, etc. for breakage, sagging or wear Inspec all oil lines, fuel lines and fittings for wear, leakage, heat damage or fatigue Actuate waste gate control: check spring preload and examine control fr any pending sign of breakage Remove inlet hose to compressor and visually inspect compressor wheel Inspect the compressor wheel for nicks, cracks or broken compressor blades Inspect for excess bearing drag or compressor wheel rubbing against Inspect induction and exhaust components for worn or damaged areas, loose clamps, cracks and leaks Inspect turbine wheel for broken blades or signs of rubbing
Left	<i>Right</i>	X X X X	100 Hr  X  X  X  X  X  X  X  X  X  X  X  X  X	Inspect all rubber air inlet ducting and compressor discharger ducting for worn spots, loose clamps or leaks Inspect fiberglass engine air inlet assembly for cracks, loose clamps and loose screws Inspect waste gate housing, exhaust ducting and exhaust stacksfor signs of leaks or cracks Carefully inspect all turbo support brackets, struts, etc. for breakage, sagging or wear Inspec all oil lines, fuel lines and fittings for wear, leakage, heat damage or fatigue Actuate waste gate control: check spring preload and examine control fr any pending sign of breakage Remove inlet hose to compressor and visually inspect compressor wheel Inspect the compressor wheel for nicks, cracks or broken compressor blades Inspect for excess bearing drag or compressor wheel rubbing against Inspect induction and exhaust components for worn or damaged areas, loose clamps, cracks and leaks Inspect turbine wheel for broken blades or signs of rubbing Inspect rigging of exhaust waste gates
Left	<i>Right</i>	X X X X	100 Hr  X  X  X  X  X  X  X  X  X  X  X  X  X	Inspect all rubber air inlet ducting and compressor discharger ducting for worn spots, loose clamps or leaks Inspect fiberglass engine air inlet assembly for cracks, loose clamps and loose screws Inspect waste gate housing, exhaust ducting and exhaust stacksfor signs of leaks or cracks Carefully inspect all turbo support brackets, struts, etc. for breakage, sagging or wear Inspec all oil lines, fuel lines and fittings for wear, leakage, heat damage or fatigue Actuate waste gate control: check spring preload and examine control fr any pending sign of breakage Remove inlet hose to compressor and visually inspect compressor wheel Inspect the compressor wheel for nicks, cracks or broken compressor blades Inspect for excess bearing drag or compressor wheel rubbing against Inspect induction and exhaust components for worn or damaged areas, loose clamps, cracks and leaks Inspect turbine wheel for broken blades or signs of rubbing Inspect rigging of exhaust waste gates Inspect rigging of alternate air control Clean turbocharger oil filter per Turbo Oil Filter Cleaning Procedure, Secton
Left	<i>Right</i>	X X X X X	100 Hr  X  X  X  X  X  X  X  X  X  X  X  X  X	Inspect all rubber air inlet ducting and compressor discharger ducting for worn spots, loose clamps or leaks Inspect fiberglass engine air inlet assembly for cracks, loose clamps and loose screws Inspect waste gate housing, exhaust ducting and exhaust stacksfor signs of leaks or cracks Carefully inspect all turbo support brackets, struts, etc. for breakage, sagging or wear Inspec all oil lines, fuel lines and fittings for wear, leakage, heat damage or fatigue Actuate waste gate control: check spring preload and examine control fr any pending sign of breakage Remove inlet hose to compressor and visually inspect compressor wheel Inspect the compressor wheel for nicks, cracks or broken compressor blades Inspect for excess bearing drag or compressor wheel rubbing against Inspect induction and exhaust components for worn or damaged areas, loose clamps, cracks and leaks Inspect turbine wheel for broken blades or signs of rubbing Inspect rigging of exhaust waste gates Inspect rigging of alternate air control

<u>Left</u>	<u>Right</u>	<u>50 Hr</u>	<u>100 Hr</u>	<u>CABIN GROUP</u>
			X	Remove inspection plates and panels.
			X	Inspect cabin entrance door, baggage door and windows for damage,
				operation and security.
			X	Inspect upholstery for tears.
			X	Inspect seats, seat belts, securing brackets and bolts. Inspect trim operation.
			X	Inspect brake cylinders for operation and leaks. Inspect parking brake.
			X	Inspet control wheels, column, pulleys and cables. Check landing,
			X	Inspect instruments, lines and attachments.
			X	Inspect condition of vacuum operated instruments and operation of electric
			X	Inspect altimeter and calibrate system fi appropriate.
			X	Inspect operation of fuel selector valves and gauges
			X	Inspect operation of crossfeed valve
			X	Inspect operation of heater fuel valve
			X	Inspect oxygen outlets for defects and corrosion
			X X	Inspect oxygen system operation and components
Ш			Λ	Reinstall inspection plates and panels
<u>Left</u>	<u>Right</u>	<u>50 Hr</u>	<u>100 Hr</u>	FUSELAGE AND EMPANNAGE GROUP
			X	Remove inspection plates and panels.
			X	Check fluid in brake reservoir, fil asrequired.
		X	X	Inspect battery box and cables. Flush box as required and fill battery per
		Λ	Λ	instructions ni Servicing Battery, Section II, Service Manual
			X	Inspect heater for fuel or fume leaks.
			X	Check heater operation hours (Hobbs time as per AD 82-07-03 (Heater AL
Ш			71	required every 24 months or 100 hours of operation).
			X	Inspect electronic installations.
			X	Inspect and replace if necessary central instrument air filter (at least annually)
			X	Inspect bulkheads and stringers for damage.
			X	Inspect loop and loop mount, antenna mount and electric wiring
			X	Inspect ELT installation and antenna condition. Change batteries in ELT
				(Req'd yearly).
			X	Inspect fuel lines and valves for damage and operation.
			X	Inspect security of all lines.
			X	Inspect stabilator fin and rudder surfaces for damage.
			X	Inspect stabilator bearings and horns for damage and operation (refer to lastest Piper Service Bulletin No. 464).
			X	Inspect rudder hinges, horn and attachments for damage and operation.  Inspect rudder trim mechanism, lubricate.
			X	Inspect stabilator trim mechanism, lubricate.
			X	Inspect stabilator free play (refer to Service Manual, Section IV).
_				Inspect aileron, rudder, stabilator, trim cables, turnbuckles, guides and
			X	pulleys for safeties, damage and operation.
			X	Inspect rotating beacon for wear, etc.
			X	Lubricate per lubrication chart in Service Manual.
			X	Inspect security of Autopilot bridle cable clamps.
			X	Reinstall inspection plates and panels.

<u>Left</u>	<u>Right</u>	<u>50 Hr</u>	<u>100 Hr</u>	WING GROUP
			X	Remove inspection plates and fairings.
			X	Inspect wing, aileron and flap surfaces fordamage, cracks, loose rivets, and
Ш				condition of wing tips.
			X	Inspect condition of Wing walk
			X	Inspect aileron attachments and hinges for damage, looseness and operation.
			X	Inspect aileron cables, pulleys, belleranks and control rods for corrosion,
				damage, and operation.  Inspect flap attachments, tracks and rollers fordamage, looseness and
		X	X	operation. Clean tracks and rollers.
_				Inspect flap cables, pulleys, step lock, belleranks and control rods for
			X	corrosion, damage and operation.
			X	Lubricate per lubrication chart in Service Manual.
			X	Inspect wing attachment bolts and brackets.
			X	Inspect engine mount attaching structure.
			X	Inspect fuel cells and lines for leaks and water.
			X	Inspect fuel vents.
			X	Inspect switches to indicators registering fuel cell quantity
			X	Inspect fuel cell vents.
			X	Inspect thermos type fuel cap rubber seals for brittleness and deterioration.
			X	Inspect for exhaust corrosion ni wing panel cavity.
			X	Reinstall inspection plates and fairings.
<u>Left</u>	<u>Right</u>	<u>50 Hr</u>	<u>100 Hr</u>	<u>OPERATIONAL INSPECTION</u>
		X	X	Check fuel pumpand fuel tank selector operation.
		X	X	Check indication offuel quantity and pressure or flow gauges.
		X	X	Check oil pressure and temperature indications.
		X	X	Check alternator output.
		X	X	Check manifold pressure indications.
		X	X	Check operation of brakes and parking brake.
		X	X X	Check operation of vacuum gauge and L/R indicators.
		X X	X X	Check gyros for noise and roughness.  Check cabin heat operation.
		X	X X	Check magneto switch operation.
		X	X	Check throttle and mixture operation.
		X	X	Check engine idle.
		X	X	Check propeller smoothness and governor action.
		X	X	Check electronic equipment operation.
		X	X	Check operation of controls and flaps.
		X	X	Check override function of auto-pilot.
		X	X	Check operation of Pitch Trim System.
<u>Left</u>	<u>Right</u>	<u>50 Hr</u>	<u>100 Hr</u>	<u>GENERAL</u>
		X	X	Aircraft conforms to FAA specifications.
		X	X	Al FAA AD's complied with.
		X	X	All Manufacturer's Service Letters and Bulletins complied with.
		X	X	All aircraft papers in proper order.
